Summary

Game designer and developer with a Computer Science background and a passion for stories that only games can tell. Experienced across the full design-to-implementation pipeline, from systems and mechanics design to hands-on programming in Unity, Godot, and Twine. Shipped contributions to two Apple Arcade titles, with personal projects exploring branching narrative, player choice, and the intersection of mechanics and meaning.

Work Experience

Game Developer (GRIT Trainee), Garena Feb 2025 – Aug 2025

- Prototyped social multiplayer game concepts in Roblox and Unity through rapid two-week development sprints, iterating on mechanics based on design feedback and playtesting.
- Worked across both game design and programming, independently owning both disciplines on some prototypes and serving as a dedicated programmer on others.
- Collaborated with artists, designers, and other programmers to implement gameplay systems and turn early concepts into playable multiplayer experiences.

Game Design Intern, Mighty Bear Games Jul 2020 - Jun 2021

- **Butter Royale (Apple Arcade):** Contributed to design and documentation of quality-of-life features including a replay system and daily login rewards. Conducted playtesting and player support.
- **Disney Melee Mania (Apple Arcade)**: Researched Disney and Pixar source material to identify canonically accurate ability inspirations, compiling visual references for the design and art teams. Contributed to early power-up system prototyping.

Projects

Bite Club (GMTK Game Jam 2026) Itch Page

Two-person Unity game featuring timing-based boxing combat. Implemented all programming, including punch combos, directional dodging, enemy behaviour, UI, and knockdown recovery systems.

Scop, Sing Us a Song Itch Page

Solo interactive narrative set at Beowulf's funeral. Designed branching story structure, wrote all narrative content, and implemented custom HTML/CSS/JS. Features interlocking "forgotten stories" and "forgotten names" systems that mechanically mirror the fragility of memory across playthroughs.

Iris Itch Page

Solo interactive narrative exploring player complicity and unreliable perspective. Features three branching endings and custom styling (colour-coded text, timed effects, and sound design) to disorient the player as the truth is revealed.

Mirror's Memento Itch Page

Cross-disciplinary university project. Implemented core puzzle systems including switches, conveyors, and room rotation, plus a BFS-driven hint system. Designed narrative structure and wrote all flavour text and cutscenes.

Anamnesis (Develop at Ubisoft 2024–25)

Solo 72-hour prototype. A puzzle-platformer where death spawns a replaying ghost the player must use strategically. Built all gameplay systems using Ubisoft's minimalist API.

Golfers of the Galaxy (Ubisoft NEXT 2025)

Solo 96-hour competition entry. Physics-based minigolf across rotating planets with gravity wells. Built all gameplay and level systems using Ubisoft's minimalist API.

Education

2021 - 2025 HBSc in **Computer Science** at the **University of Toronto** (GPA: 3.9/4.0)
Focus in **Game Design**
Minor in **Digital Humanities**
(High Distinction, Dean's List 2021-25)

Skills

Programming	C++, C#, Python, Java, JavaScript, GDScript, Lua
Engines/Tools	Unity, Godot, Twine, Git, React
Game Design	Narrative design, systems design, puzzle design, playtesting
Languages	English (native), Japanese (intermediate, JLPT N3)
